Machine solution

The Altivar Machine ATV320 is an IP 20 variable speed drive for three-phase synchronous and asynchronous motors and incorporates functions suitable for the most common applications, including:

- Packaging
- Material handling
- Textiles
- Material working
- Mechanical actuators
- Hoisting

The Altivar Machine ATV320 series is focused on easy integration for simple and advanced machine requirements with proven motor control and connectivity.

It offers enhanced automation capabilities and performance for industrial machine applications:

- Effective control of asynchronous and permanent magnet motors
- Complete integration into any system architecture (Ethernet, CANopen, Profibus, etc.)
- Compact and book format for integration in a variety of different cabinet types
- Integrated safety function for compliance with functional safety standards
- Enhanced resistance to polluted atmospheres

By taking account of constraints on product setup and use right from the design stage, we have been able to simplify integration of the Altivar Machine ATV320 drive into industrial machines. It features more than 150 functions. It is robust, easy to install, and compliant with the Machinery Directive 2006/42/EC.

Schneider Electric's MachineStruxure solutions provide abundant ready-to-use, PLCopen-compliant libraries. SoMachine can be used to develop, configure, and set up an entire machine in a single software environment. Through the FDT/DTM technology, it is possible to configure, control, and diagnose Altivar Machine ATV320 drives directly in SoMachine and SoMove software by means of the same software brick (DTM).

With seamless integration under this platform, Altivar Machine ATV320 benefits from the advantage of shorter engineering and design times. Optional Ethernet-based communication capability makes it accessible to real-time production data at any level of the automation system via a web server.

Applications

Altivar Machine ATV320 drives incorporate functions suitable for the most common applications, including:

Material handling

- Small conveyors
- Large conveying systems
- Turntable conveyors, etc.

Packing and packaging machines

- Small bagging machines
- Labeling machines
- Carton packers, etc.

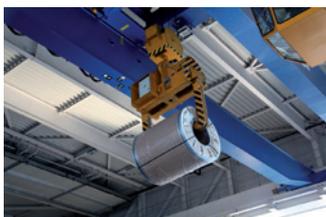

Material handling application

Packing and Packaging machines

Textile application

Hoisting application

Mechanical actuator application: pump

Material working application

Applications (continued)

Textiles

- Rapiert loom machine
- Knitting machine
- Web cutting

Hoisting

- Pick and place
- Industrial elevators for manufacturing
- Gantry cranes

Mechanical actuators

- Pumps
- Fans
- Compressors

Material working

- Woodworking machinery
 - Saws
 - Gummers
 - Planers
- Metal processing
 - Bending presses
 - Welding machines
 - Cutting machines
 - Grinding

Special machines

- Mixers
- Kneaders
- Transfer machine

Presentation

The Altivar Machine ATV320 drive is a variable speed drive for three-phase asynchronous and synchronous motors from 0.18 to 15 kW.

The Altivar Machine ATV320 drive is robust, simple to commission, and easy to integrate into different machine layouts and cabinets. It can also be integrated into commonly used automation architectures.

Altivar 320 variable speed drives are particularly suitable for applications involving simple industrial machines.

Furthermore, Altivar Machine ATV320 embeds many practical functions so that advanced application requirements can be covered. Altivar Machine ATV320 is designed to improve machine performance and increase machine availability while reducing the total machine cost.

Flexible

There are 2 different formats for products up to 4 kW (with 240 V single-phase and 480 V three-phase supply voltage); book and compact:

- The book format (45 or 60 mm wide) is designed to be mounted side-by-side to save significant space on the installation footprint.
- The compact format is designed to be integrated in compact electrical cabinets (200 mm cabinet depth or less) or mounted directly on the machine frame.

Advanced connectivity

Advanced connectivity allows the Altivar Machine ATV320 to operate in commonly used automation architectures; CANopen and Modbus RTU communication protocols are embedded and various communication fieldbus options are offered based on:

- Ethernet, Modbus TCP, EtherNet/IP, Profinet, EtherCAT
- Serial, CANOpen (daisy chain), ProfibusDP

Robust design

Altivar Machine ATV320 variable speed drives can operate in harsh environment conditions:

- Up to 50 °C/122 °F without derating
 - Up to 60 °C/140 °F with derating without the need for an additional fan
- The printed circuit boards are coated according to IEC 60721-3-3 class 3C3 for industrial environments and 3S2 for solid particles.

Effective motor control

Control of both asynchronous and synchronous motors is both simple and effective. Altivar Machine ATV320 offers +/- 10% accuracy of motor slip in open loop control with asynchronous motors.

Integrated safety functions and control system functions

As standard, Altivar Machine ATV320 drives provide innovative features including integrated safety functions and control system functions to meet the requirements of specialized applications.

The comprehensive integrated safety function solution includes the Safe Torque Off (STO) function for simple requirements, as well as more advanced monitoring functions such as Safely Limited Speed (SLS), Safe Maximum Speed (SMS), Guard Door Locking (GDL), and Safe Stop 1 (SS1).

Innovative functions (1)

Example of an application requiring the use of safety functions

Safety functions

The Altivar Machine ATV320 range of variable speed drives provides integrated safety functions (according to standard IEC 61508) comparable with performance level “e” (PL e) according to standard ISO/EN 13849-1-2.

The Altivar Machine ATV320 drive software includes 5 safety functions that help machines meet safety requirements, whether or not they are used in conjunction with a Preventa safety module (2):

- STO: Safe Torque Off
- SLS: Safely Limited Speed
- SS1: Safe Stop 1
- SMS: Safe Maximum Speed
- GDL: Guard Door Locking

These safety functions are configured using SoMove configuration software. For more information, please refer to the SoMove catalog available on our website www.schneider-electric.com.

Note: To set up the safety functions, please refer to the “Altivar Machine ATV320 Safety Functions Manual” available on our website www.schneider-electric.com.

ATV Logic

ATV Logic is used to adapt Altivar Machine ATV320 variable speed drives to specific applications by means of customizable integrated control system functions.

The integrated control system functions featuring ATV Logic can be used to perform simple operations without adding further devices, which reduces costs. ATV Logic is programmed via the SoMove configuration software (refer to the SoMove catalog available on our website www.schneider-electric.com) and provides access to the following functions:

- Arithmetical operations, Boolean operators, counters, timers, etc.
- Programming of up to 50 functions by an automated sequence
- Access to the drive’s internal variables

Functions dedicated to synchronous motors

Altivar Machine ATV320 variable speed drives integrate new functions for synchronous motors that are suitable for the majority of commercially-available motors.

- Simplified setting due to the reduced number of configuration parameters (4 maximum)
- Autotuning of the drive/motor combination
- High-frequency injection for high performance in open loop mode

Application functions

Altivar Machine ATV320 variable speed drives feature 150 functions, including:

- Configurations: standard or customizable
- Application-specific functions for material handling, textiles, hoisting, mechanical actuators
- Adjustable switching frequency (adjusted motor current, reduced motor noise)
- Adjustable monitoring function to create “My Menu” function to obtain user-specific monitoring
- Ability to upload/download drive configurations with the power off

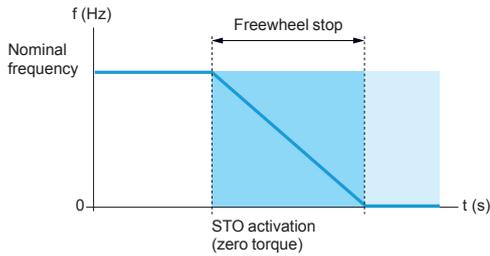

Example of an application (scrolling billboard) requiring a typical ATV Logic sequence

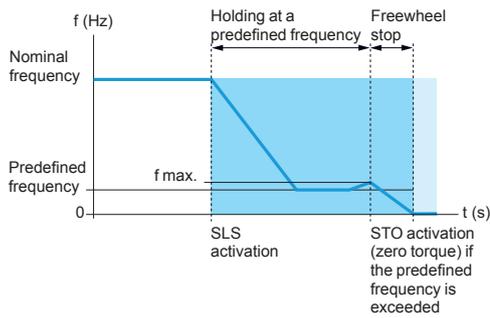

Examples of use (functions/applications)

Functions	Applications				
	Handling	Conveying	Packing	Woodworking machinery	Metal processing
Integrated safety functions					
Communication buses and networks					
Fast response time					
Control profile for synchronous motors					
Application-specific functions					
		Typical use			Not applicable

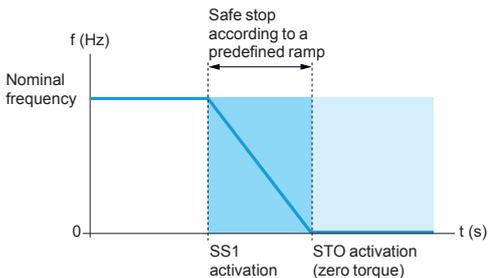

(1) Non-exhaustive list; please consult our website www.schneider-electric.com.
 (2) Please refer to the “Safety functions and solutions using Preventa” catalog.

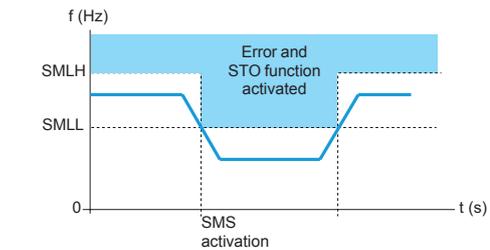

Activation of the STO safety function

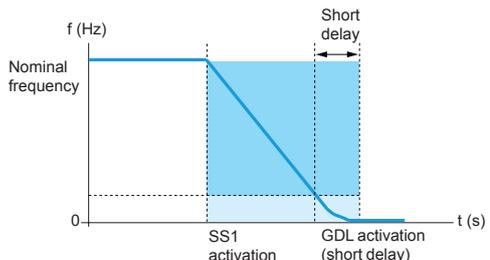

Activation of the SLS safety function

Activation of the SS1 safety function

Activation of the SMS safety function

Activation of the GDL safety function (example of stop type SS1)

Integrated safety functions (1)

Altivar Machine ATV320 drives include 5 safety functions:

- STO: Safe Torque Off (2)
- SLS: Safely Limited Speed
- SS1: Safe Stop 1
- SMS: Safe Maximum Speed
- GDL: Guard Door Lock

These functions are certified in accordance with IEC61508 Ed.2 "Functional safety of electrical/electronic/programmable electronic safety-related".

These integrated functions make it possible to:

- Simplify setup of machines that require a complex safety related device
- Improve performance during maintenance by reducing machine or installation downtime

Note: Some applications may require the addition of external Preventa safety modules (3).

Safe Torque Off (STO) safety function (1) (2)

This function brings the machine safely into a no-torque state and/or prevents it from starting accidentally.

Safely Limited Speed (SLS) safety function (1)

The SLS integrated safety function can be initiated by activation of safety function inputs. This function prevents the motor from exceeding the specified speed limit. If the motor speed exceeds the specified speed limit value, safety function STO is triggered.

Safe Stop 1 (SS1) safety function (1)

The SS1 integrated safety function causes a category 1 safe stop. This function monitors the deceleration according to a dedicated deceleration ramp and safely shuts off the torque once standstill has been achieved.

Safe Maximum Speed (SMS) safety function (1)

This function prevents the speed of the motor from exceeding the pre-defined speed limit.

- 2 different speed limits can be defined and can be selected by logic inputs.
- If the motor speed exceeds the pre-defined speed limit value, safety function STO is triggered.

Once the SMS function is configured, it is continuously active.

Guard Door Locking (GDL) safety function (1)

This function allows you to release the guard door lock after specified delay when the motor power is turned off. The specified delay is chosen according to the type of stop.

The front door of the machine can be opened only after the motor is stopped, this function helps to ensure the safety of the machine operator.

Setting up the integrated safety functions (1)

Setting up the integrated safety functions in the Altivar Machine ATV320 drive does not require any options or additional accessories.

The functions are connected directly to the drive's digital inputs and can only be configured using SoMove setup software.

For more information, please refer to the SoMove catalog available on our website www.schneider-electric.com.

(1) Please refer to the "Altivar Machine ATV320 Safety Functions Manual" available on our website www.schneider-electric.com.

(2) The safety certification of ATV320 compact control block products is still ongoing; compact products will only have STO (SIL2) level until certification is complete.

(3) Please refer to the "Safety functions and solutions using Preventa" catalog.

The offer

The Altivar Machine ATV320 range of variable speed drives covers motor power ratings from 0.18 kW/ 0.25 HP to 15 kW/20 HP with 3 types of power supply in book and compact control block design:

- 200 V...240 V single-phase, 0.18 kW/0.25 HP to 2.2 kW/3 HP (**ATV320U●●M2B**, **ATV320U●●M2C**)
- 200 V...240 V three-phase, 0.18 kW/0.25 HP to 15 kW/20 HP (**ATV320●●●M3C**)
- 380 V...500 V three-phase, 0.37 kW/0.50 HP to 15 kW/20 HP (**ATV320●●●N4B** and **ATV320U●●N4C**)

References ending with "B" indicate that the product has a book control block. The book control block product has a book format up to 4 kW/5 HP (book format is no longer available for 5.5/7 HP to 15 kW/20 HP). References ending with "C" designate that the product has a compact control block and a compact format.

For the book format, several drives can be mounted side-by-side to save space.

Altivar Machine ATV320 drives integrate the Modbus and CANopen communication protocols as standard. Both can be accessed via the RJ45 connector on the front of the drive.

To simplify connection of the Altivar Machine ATV320 drive to the CANopen machine bus, 3 dedicated communication modules are available with different connectors:

- CANopen daisy chain module with 2 RJ45 connectors
 - CANopen module with 9-way SUB-D connector
 - CANopen module with 5-way terminal block
- See pages 34 and 35.

In addition to the Modbus and CANopen standard protocols, Altivar Machine ATV320 drives can be connected to the main industrial communication buses and networks by adding one of the following optional communication modules:

- Modbus/TCP - Ethernet/IP
 - PROFIBUS DP V1
 - DeviceNet
 - EtherCAT
 - POWERLINK
 - ProfiNet
- See page 32.

Electromagnetic compatibility (EMC)

The built-in EMC filters in **ATV320U●●M2B**, **ATV320U●●M2C**, **ATV320●●●N4B**, and **ATV320U●●N4C** drives and compliance with EMC requirements simplify installation and provide an economical way for the device to meet the CE mark criteria.

The EMC filter enables compliance with standard IEC 61800-3:

- category C2 for a maximum motor cable length of:
 - 10 m/32.80 ft for **ATV320U●●M2B/ATV320U●●M2C** variable speed drives
 - 5 m/16.40 ft for **ATV320U04N4●...U40N4●** variable speed drives
- category C3 for a maximum motor cable length of:
 - 25 m/82.02 ft for **ATV320U55N4B...D15N4B** variable speed drives.

This filter can be disconnected via a jumper.

ATV320●●●M3C variable speed drives do not have an integrated EMC filter. An additional EMC filter is required to enable compliance with standard IEC 61800-3, category C2.

Additional filters are available as an option and can be installed by the customer to reduce the level of emissions from Altivar Machine ATV320 variable speed drives. In particular, they allow a maximum motor cable length of 100 m/328.08 ft.

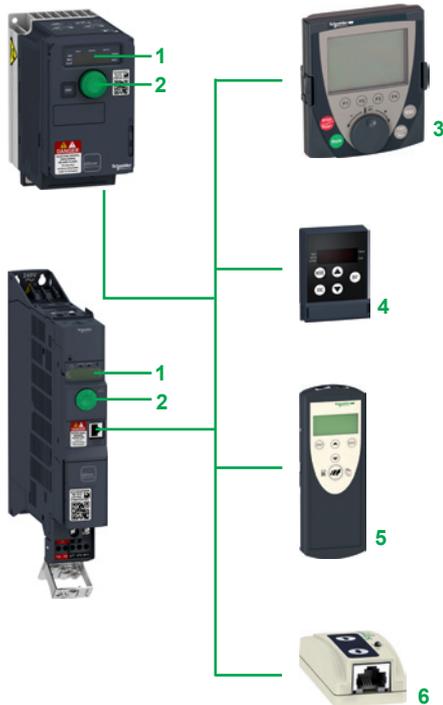

See page 28.

Accessories and external options

Accessories and external options are available with Altivar Machine ATV320 drives. The type of external accessories and options depends on the drive rating.

Accessories

- UL Type 1 conformity kits, plates for direct mounting on 35 mm/1.38 in. rails, etc.
 - Bracket for direct mounting of GV2/ATV320U●●●B circuit-breaker
 - Adapter for mounting the control module at 90°, for mounting the power module on its side, keeping the control module visible and accessible
 - Daisy chain DC bus cordsets for daisy chain connection of the DC bus
- See page 14.

ATV320 Dialog and configuration tools

The offer (continued)

External options

- Braking resistors
 - Line chokes
 - Motor chokes
 - Additional EMC filters
 - Adapter extension module for compact control block drive
 - Speed monitoring module
- See pages 24 to 31.

Dialog and configuration tools

Human-Machine interface

The 4-digit display **1** displays drive states, error codes, and parameter values. The navigation button **2** is used to navigate through the menus, modify values, and change the motor speed in local mode.

HMI terminals

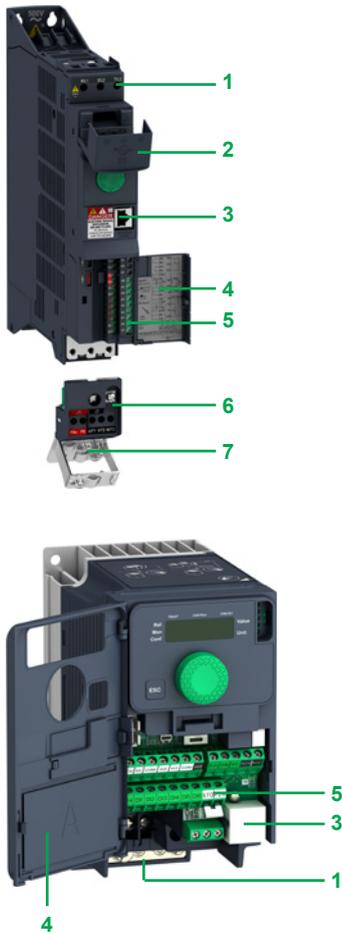

Altivar Machine ATV320 drives can be connected to a remote display terminal **4** or a remote graphic display terminal **3**, which are available as options. The remote display terminal can be mounted on an enclosure door with IP 54 or IP 65 degree of protection. It provides access to the same functions as the Human-Machine interface. The remote graphic display terminal, with its text display in the user's language, provides a user-friendly interface for configuration, debugging, or maintenance. It can also be mounted on an enclosure door with IP 54 or IP 65 degree of protection. See page 16.

SoMove setup software

SoMove setup software is used to configure, adjust, debug (using the Oscilloscope function), and maintain Altivar Machine ATV320 drives in the same way as for other Schneider Electric drives and starters. See page 18. For more information, please refer to the SoMove catalog available on our website www.schneider-electric.com.

Simple Loader and Multi-Loader configuration tools

The Simple Loader tool **6** enables the configuration from one powered-up drive to be duplicated on another powered-up drive. The Multi-Loader tool **5** enables configurations from a PC or drive to be copied and duplicated on another drive; the drives do not need to be powered up. See page 19.

Description

- 1 Power terminals
 - 2 Protective cover to block access to the power terminals 1 when closed
 - 3 RJ45 communication port for access to integrated protocols: Modbus serial link and CANopen machine bus
 - 4 Protective cover for access to the control terminals (also includes a label with a wiring diagram)
 - 5 Control terminals for I/O connection:
 - 6 digital inputs:
 - 4 configurable for positive digital input (Sink) or negative digital input (Source)
 - 1 input configurable as a PTC probe input
 - 1 x 20 kHz pulse control input, 24 V $\overline{\text{---}}$, impedance 3.5 K Ω , sampling time 8 ms
 - 1 digital output:
 - 24 V $\overline{\text{---}}$, sampling time 2 ms, maximum voltage 30 V, maximum current 100 mA
 - 3 analog inputs:
 - 1 current analog input, by programming X and Y from 0 to 20 mA, impedance 250 Ω
 - 1 bipolar differential analog input ± 10 V, impedance 30 Ω
 - 1 voltage analog input ± 10 V, impedance 30 Ω , sampling time 2 ms
 - 1 analog output configurable as:
 - voltage analog output 0...10 V $\overline{\text{---}}$, minimum load impedance 470 Ω
 - current analog output 0...20 mA, maximum load impedance 800 Ω
 - 2 relay outputs:
 - 1 NC contact and 1 NO contact with common point
- Minimum switching capacity 5 mA for 24 V $\overline{\text{---}}$, maximum switching capacity 3 A on resistive load, 2 A on inductive load for 250 V \sim or 30 V $\overline{\text{---}}$
- 1 NC contact, maximum switching capacity 5 A on resistive load
- 6 Removable motor power terminal block (allows quick disconnect and re-connect of motor cables during maintenance operations)
- 7 EMC mounting plate (integral part of the motor power terminal block 6). This plate is supplied with a cable guide support, which can be used if required.

Standards and certifications (1)

Altivar Machine ATV320 drives have been developed to conform to the strictest international standards and recommendations relating to industrial electrical control devices (IEC), in particular:

- IEC 61800-5-1
- IEC 61800-3:
 - EMC immunity: IEC 61800-3, Environments 1 and 2
 - Conducted emission compliance:
 - IEC 61800-3, category C2, with integrated EMC filter for **ATV320...M2**, **ATV320U04N4...U40N4** drives
 - IEC 61800-3, category C2, with additional EMC filter for **ATV320...M3C** drives
 - IEC 61800-3, category C3, with integrated EMC filter for **ATV320U55N4B...D15N4B** drives
- ISO/EN 13849-1/-2 category 3 (PL d)
- IEC 61508 (parts 1 & 2)
- IEC 60721-3-3 classes 3C3 and 3S2

Altivar Machine ATV320 drives are certified:

- UL 508C / UL61800-5-1
- CSA 22.2 N274
- NOM
- EAC
- RCM

They are CE marked according to the European low voltage (2014/35/UE) and EMC (2014/30/UE) directives.

They also comply with environmental directives (RoHS).

(1) A complete list of certifications and characteristics is available on our website www.schneider-electric.com.

Remote display terminal with cover open

Remote display terminal with cover closed

Remote graphic display terminal

Remote display terminal

This terminal is used to locate the Human-Machine Interface of the Altivar Machine ATV320 drive remotely on the door of an enclosure with IP 54 or IP 65 protection. It is used to:

- Control, adjust, and configure the drive remotely
- Display the drive status and error codes

Its maximum operating temperature is 50 °C/122 °F.

Description

- 1 4-digit display
- 2 Navigation ▲, ▼ and selection ENT, ESC keys
- 3 Motor local control keys:
 - RUN: Starts the motor
 - FWD/REV: Reverses the direction of rotation of the motor
 - STOP/RESET: Stops the motor/clears detected errors
- 4 MODE: Operating mode selection key
- 5 Cover for access to the motor local control keys

Remote graphic display terminal

This remote graphic display terminal, common across Schneider Electric's variable speed drive ranges, provides a user-friendly interface for configuration, debugging, and maintenance. In particular, it is possible to transfer and store up to 4 configurations.

For portable use or mounted on an enclosure door, it can also be connected to multiple drives (see page 17).

Its main functions are as follows:

- The graphic screen displays 8 lines of 24 characters of plain text.
- The navigation button provides quick and easy access to the drop-down menus.
- It is supplied with 6 languages installed (Chinese, English, French, German, Italian, and Spanish). The available languages can be modified using the Multi-Loader configuration tool (VW3A8121).

Its maximum operating temperature is 60 °C/140 °F, and it features IP 54 protection; this can be increased to IP 65 when mounted on an enclosure door.

Description

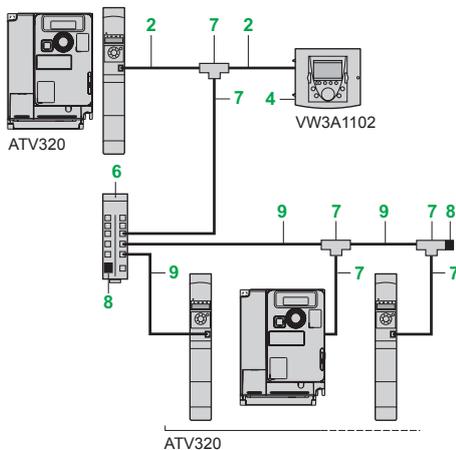

- 6 Graphic display:
 - 8 lines of 24 characters, 240 x 160 pixels, large digit display
- 7 Function keys (not operational on the Altivar 320)
- 8 Navigation button:
 - Rotate ±: Goes to the next/previous line, increases/decreases the value
 - Press: Saves the current value (ENT)
- ESC key: Aborts a value, parameter, or menu to return to the previous selection
- 9 Motor local control keys:
 - RUN: Starts the motor
 - STOP/RESET: Stops the motor/clears detected errors
 - FWD/REV: Reverses the direction of rotation of the motor

Portable use of the remote graphic display terminal:
1 + 2 + 3

Using the remote graphic display terminal on
enclosure door:

Example of connection via multidrop link

All the components described on this page enable a remote graphic display terminal to be connected to several drives via a multidrop link. This multidrop link is connected to the RJ45 port on the Modbus/CANopen communication port. See the example opposite.

Variable speed drives

Altivar Machine ATV320

Option: configuration tools

Altivar Machine DTM in SoMove software

DTM

Presentation

Using FDT/DTM technology it is possible to configure, control, and diagnose Altivar Machine drives directly in SoMachine and SoMove software by means of the same software brick (DTM).

FDT/DTM technology standardizes the communication interface between field devices and host systems. The DTM contains a uniform structure for managing drive access parameters.

The Altivar Machine ATV320 DTM library is a flexible, open, and interactive tool that can be used in a third-party FDT.

DTMs can be downloaded from our website www.schneider-electric.com.

Specific functions of the Altivar Machine ATV320 DTM

- Offline or online access to drive data
- Transfer of configuration files from and to the drive
- Customization (My Menu)
- Access to drive parameters and option cards
- Oscilloscope function
- Graphic interface to assist with configuration of the Altivar Machine ATV320
- Drive parameter monitoring
- Detected error and warning logs

Advantages of the DTM library in SoMachine

SoMachine software is a single tool for configuration, setup, and diagnostics for the complete machine. It can be integrated in the fieldbus topology.

SoMachine additionally offers Function Block library possibilities for Altivar Machine drives.

Advantages of the DTM library in SoMove

SoMove is a drive-oriented software environment.

It allows a wired connection directly to the drive Modbus serial port.

SoMove setup software

SoMove Lite setup software for PC is used to prepare drive configuration files.

For more information, refer to the SoMove catalog available on our website www.schneider-electric.com.

Configuring an Altivar 320 in its packaging:
VW3A8121 + VW3A8126 cordset

Simple Loader and Multi-Loader configuration tools

The Simple Loader tool enables one drive configuration to be duplicated and transferred to another drive (both drives must be powered up). It is connected to the drive RJ45 communication port.

The Multi-Loader tool enables a number of configurations from a PC or drive to be copied and loaded onto other drives (Altivar Machine ATV320 drives do not need to be powered up when using the Multi-Loader tool).

Other option modules		
Speed monitoring card - RS422 - 5V	VW3A3620	31

(1) To use with ATV320 drives with a compact control block, the option module adapter is required (to be ordered separately).

(2) Only one module can be connected at once.

Presentation

Braking resistors allow Altivar Machine ATV320 drives to operate while braking to a standstill or during slowdown braking, by dissipating the braking energy. They enable maximum transient braking torque.

Depending on the drive rating, the following types of resistor are available:

- Enclosed model (IP 20 casing) designed to comply with the EMC standard and protected by a temperature-controlled switch
- Enclosed model (IP 65 casing) with cordset

Note: To optimize the size of the braking resistor, the DC buses on Altivar Machine ATV320 drives in the same application can be connected in parallel (see page 4).

Applications

Machines with high inertia, driving loads, and machines with fast cycles.

Presentation

Line chokes

Line chokes, also known as line reactors, provide improved immunity against overvoltages on the supply mains and can reduce harmonic distortion of the current produced by the drive.

The recommended chokes limit the line current. They have been developed in line with standard IEC 61800-5-1 (VDE 0160 level 1 high-energy overvoltages on the line supply).

The inductance values are defined for a voltage drop between 3% and 5% of the nominal line voltage. Values higher than this will cause loss of torque.

The use of line chokes is recommended in particular under the following circumstances:

- Supply mains with significant disturbance from other equipment (interference, overvoltages)
- Supply mains with voltage imbalance between phases > 1.8% of nominal voltage
- Drive supplied by a supply mains with very low impedance (in the vicinity of a power transformer 10 times more powerful than the drive rating)
- Installation of a large number of frequency inverters on the same supply mains
- Reduction of overloads on the $\cos \varphi$ correction capacitors, if the installation includes a power factor correction unit

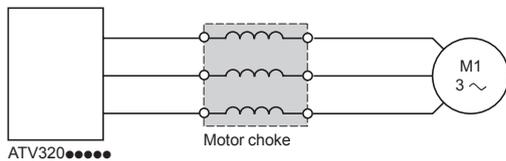

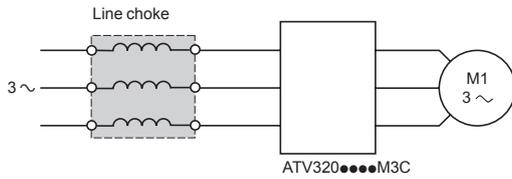

The prospective short-circuit current at the point of connection of the drive must not exceed the maximum value indicated in the reference tables (see page 12). The use of chokes allows connection to the following supply mains :

- Max. Isc 22 kA for 200/240 V
- Max. Isc 65 kA for 380/500 V

Presentation

Motor chokes

Motor chokes, also known as load reactors, can be inserted between the Altivar Machine ATV320 drive and the motor to:

- Limit the dv/dt at the motor terminals (500 to 1500 V/μs), for cables longer than 50 m/164.04 ft
- Filter interference caused by the opening of a contactor placed between the filter and the motor
- Reduce the motor ground leakage current
- Smooth the motor current wave form to reduce motor noise

(1) For an application with several motors connected in parallel, the total motor cable lengths must be added together. If a cable longer than that recommended is used, the filters may overheat.

VW3A4422 + ATV320U04N4B

Presentation

Integrated filters

Altivar Machine ATV320 drives have integrated radio interference input filters to comply with the EMC (Electromagnetic Compatibility) standard for variable speed electrical power drive products IEC 61800-3 categories C2 and C3 and the European EMC Directive.

The integrated EMC filters comply with standard IEC 61800-3:

- category C2 for a maximum motor cable length of:
 - 10 m/32.80 ft for **ATV320U●●M2B/ATV320U●●M2C** variable speed drives
 - 5 m/16.40 ft for **ATV320U04N4●...U40N4●** variable speed drives
- category C3 for a maximum motor cable length of:
 - 25 m/82.02 ft for **ATV320U55N4B...D15N4B** variable speed drives.

ATV320●●●M3C variable speed drives do not have an integrated EMC filter. An additional EMC filter is required to enable compliance with IEC 61800-3, category C2.

Additional EMC input filters

The additional EMC input filters enable the drives to meet more stringent requirements; they are designed to reduce conducted emissions on the supply mains below the limits of standard IEC 61800-3 category C1 or C2 (see page 16).

Mounting on ATV320●●●●B

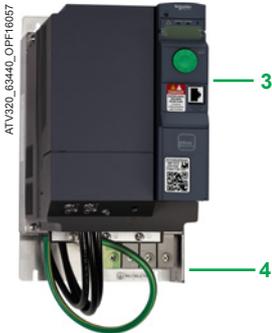

Depending on the model, additional EMC filters can be mounted beside or underneath the drive. They act as a support for the drives and are attached to them via tapped holes.

Mounting the filter on the side of the drive:

- 1 ATV320●●●M2B, ATV320U04N4B...U40N4B drives
- 2 Additional EMC input filters

Mounting the filter underneath the drive:

- 3 ATV320U55N4B...U75N4B and ATV320D11N4B...D15N4B drives
- 4 Additional EMC input filters

VW3A4424 + ATV320U55N4B

Mounting on ATV320●●●●C

Additional EMC filters can be mounted beside or underneath the drive. They act as a support for the drives and are attached to them via tapped holes.

Use according to the type of supply mains

Additional EMC filters can only be used on TN (neutral connection) and TT (grounded neutral) type systems.

Standard IEC 61800-3, appendix D2.1, states that on IT systems (isolated or impedance grounded neutral), filters can cause permanent insulation monitors to operate in a random manner.

The effectiveness of additional filters on this type of system depends on the type of impedance between neutral and ground, and therefore cannot be predicted.

If a machine has to be installed on an IT system, one solution is to insert an isolation transformer and connect the machine locally on a TN or TT system.

The radio interference input filters integrated in Altivar 320 drives can easily be disconnected by means of a selector switch without removing the drive.

(1) The filter selection tables give the maximum lengths for shielded cables connecting motors to drives. These maximum lengths are given as examples only, as they vary depending on the stray capacitance of the motors and the cables used. If motors are connected in parallel, it is the total length of all cables that should be taken into account.

(2) These values are given for a nominal switching frequency of 4 kHz.

(3) In: nominal filter current.

(4) Via heat dissipation, at the nominal filter current (In).

(5) Standard IEC 61800-3: EMC immunity and conducted and radiated EMC emissions:

- Category C1: public power supply (residential)

- Category C2: industrial power supply

Example of installing a communication module 3
(view of underside) on a drive with compact control block

Presentation

Altivar Machine ATV320 drives are designed for use with option modules according to machine and application requirements; only one option module can be used with an Altivar Machine ATV320 at a time.

The option modules are compatible with all Altivar Machine ATV320 drives (see page 20).

The **VW3A3600** option module adapter is required to connect an option module to Altivar Machine ATV320 drives with a compact control block.

Compact control block

An adapter should be added to the Altivar Machine ATV320 drives with compact control block in order to connect communication and speed monitoring modules.

- 1 Communication adapter card
- 2 Slot for the communication or speed monitoring module
- 3 Communication module

PF130614

VW3A3620

Presentation

The **VW3A3620** speed monitoring module is recommended for hoisting applications.

This module helps to detect undesired load slip on hoisting applications by means of an external encoder. The variable speed drive manages the load slip according to the configuration parameters.

Functions

- The load slip frequency threshold represents the difference between the speed feedback and the output frequency.
- The load slip detection level can be adjusted so that the function can be used more efficiently.
- The load slip direction check allows the variable speed drive to check that movement is initiated in the desired direction.
- The load slip detection duration can be configured in order to optimize the use of the function according to the changing mechanics.

The **VW3A3620** speed monitoring module helps to ensure that the actual motor speed is within the acceptable threshold settings and that movement is in the desired direction.

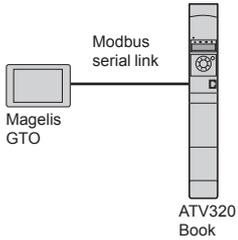

The variable speed drive will trigger a warning and the motor will stop either with a freewheel stop or via the brake logic control function (depending on the configuration) in the following cases:

- if the actual speed is different from the permitted speed reference threshold and this reaches the defined duration, or
- if the direction of motor rotation is not as expected

(1) To use with ATV320 drives with a compact control block, the option module adapter is required (to be ordered separately).

Example of configuration on Modbus serial link

Example of configuration on CANopen machine bus

Presentation

Altivar Machine ATV320 drives are designed to meet the configuration requirements found in the main industrial communication installations.

The Modbus and CANopen communication protocols are integrated as standard and can be accessed directly via the RJ45 communication port located on the front of the book control block drive and underneath the front door of the compact control block drive.

ATV320 drives can also be connected to other industrial communication buses and networks by using one of the communication modules available as an option.

Communication modules are supplied in “cassette” format for ease of mounting/removal.

Modbus serial link (1)

The Modbus serial link is used for connecting the following HMI and configuration tools:

- The Magelis HMI terminal
- Remote display terminal, remote graphic display terminal
- SoMove setup software, Simple Loader and Multi-loader configuration tools

CANopen machine bus (1) (2) (3)

The CANopen machine bus is used for integration into control system architectures, especially when combined with Modicon M241 and M251 logic controllers or Lexium 32 motion controllers.

Optimized solutions for connection to the CANopen machine bus

To simplify setting up the Altivar Machine ATV320 drive, 3 dedicated CANopen communication modules (2) are available depending on the connection and connector types:

- CANopen daisy chain module with 2 RJ45 connectors offering an optimized solution for daisy chain connection to the CANopen machine bus (see page 34)
- CANopen module for connection to the bus via 9-way SUB-D connector (see page 34)
- CANopen module for connection to the bus via terminals (see page 35)

Using one of the CANopen communication modules also reduces the installation dimensions compared to using **VW3CANTAP2** and **TSXCANTDM4** junction boxes.

Communication modules for industrial applications (3)

The following communication modules are available:

- Modbus TCP and EtherNet/IP
- PROFIBUS DP V1
- DeviceNet
- EtherCAT
- POWERLINK
- ProfiNet

Description

Altivar Machine ATV320 drives with book control block have been designed to simplify connections to communication buses and networks by means of the following:

- 1 Integrated RJ45 communication port for Modbus/CANopen on the front
- 2 Slot for the communication module
- 3 Communication module

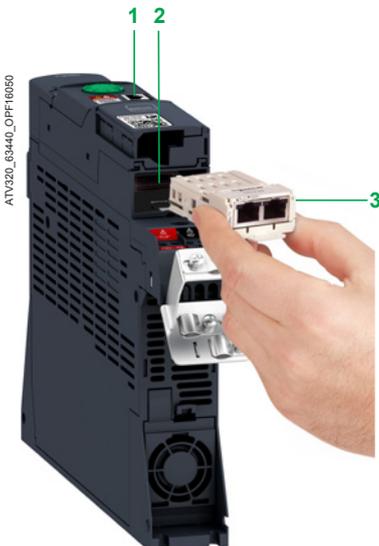

Altivar Machine ATV320 drives with compact control block are equipped as standard with:

- 1 Integrated RJ45 communication port for Modbus/CANopen
- The **VW3A3600** mechanical adapter for communication modules can be used to make more communication buses and networks available by inserting the corresponding module directly into the adapter.
- 2 Slot for the communication module
- 3 Communication module

(1) The Modbus serial link always uses the RJ45 communication port. If simultaneous use of the Modbus serial link and the CANopen machine bus is required, a CANopen communication module is needed.

(2) When one of the CANopen communication modules is inserted in the Altivar 320 drive, CANopen communication via the RJ45 communication port is disabled.

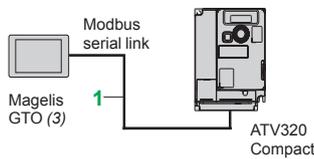

(3) The Altivar 320 drive can only take one communication module.

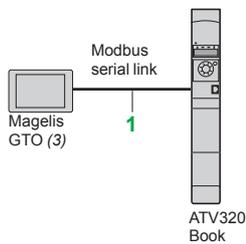

Example of installing a communication module 3 (view of underside)

Altivar 320 compact format drive with communication module in the option module adapter

Example of connection of an Altivar 320 compact format drive and a Magelis GTO HMI terminal via the Modbus serial link

Example of connection of an Altivar 320 book format drive and a Magelis GTO HMI terminal via the Modbus serial link

Functions

All Altivar Machine ATV320 drive functions can be accessed via the communication buses and networks:

- Control
- Monitoring
- Adjustment
- Configuration

The speed reference and command may come from different sources:

- digital input or analog I/O terminals
- Communication bus or network
- Remote display terminals

The ATV320 drive's advanced functions can be used to manage switching of these drive control sources according to the application requirements.

The communication periodic I/O data assignment can be selected using the network configuration software.

The ATV320 drive can be controlled:

- According to the CiA 402 native profile
- According to the I/O profile

Communication is monitored according to criteria specific to each protocol.

Regardless of protocol type, the reaction of the drive to a detected communication interruption can be configured as follows:

- Freewheel stop, stop on ramp, fast stop, or braked stop
- Maintain the last command received
- Fallback position at a predefined speed
- Ignore the detected error

(3) When one of the CANopen communication modules is inserted in the Altivar Machine ATV320 drive, CANopen communication via the RJ45 communication port is disabled.

(4) Please refer to the "Modicon M241 logic controller" and "Modicon M251 logic controller" catalogs.

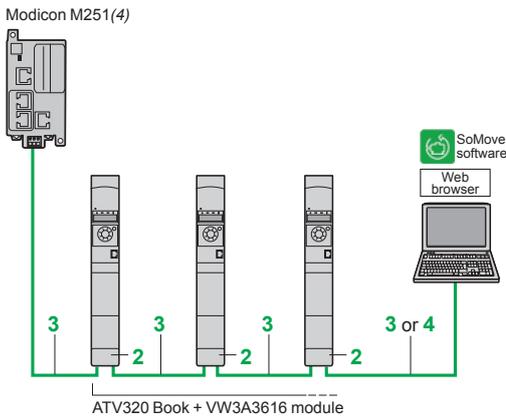

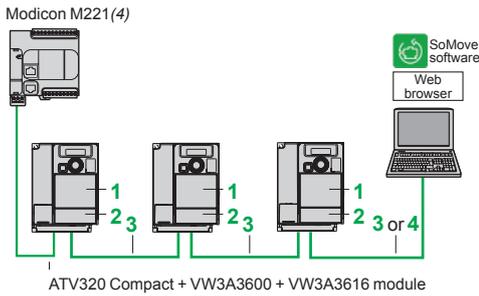

(5) Cable dependent on the type of controller or PLC; please refer to the corresponding catalog.

(6) See page 34 for item "6".

(7) Altivar Machine ATV320 products with a compact control block require the VW3A3600 option module adapter in order to use any communication option modules.

VW3A3616

Modbus TCP network and EtherNet/IP network (1) (5)

Description	Item no.	Length m/ft (3)	Reference	Weight kg/lb
-------------	----------	-----------------	-----------	--------------

Communication module

Modbus TCP and EtherNet/IP network module	2	–	VW3A3616	0.300/ 0.661
--	----------	---	-----------------	-----------------

For connection to the Modbus TCP network or EtherNet/IP network
Ports: 2 RJ45 connectors

- 10/100 Mbps, half duplex and full duplex
- Embedded web server

Requires cordsets
490NTW000●●/●●U or
490NTC000●●/●●U

ConneXium cordsets (2) (3)

Straight shielded twisted pair cordsets	3	2.0/ 6.56	490NTW00002	–
equipped with 2 RJ45 connectors		5.0/ 16.40	490NTW00005	–
Conforming to EIA/TIA-568 category 5 and IEC 11801/EN 50173-1, class D standards		12/ 39.37	490NTW00012	–

Crossed shielded twisted pair cordsets	4	5.0/ 16.40	490NTC00005	–
equipped with 2 RJ45 connectors		15/ 49.21	490NTC00015	–
Conforming to EIA/TIA-568 category 5 and IEC 11801/EN 50173-1, class D standards				

Straight shielded twisted pair cables	3	2.0/ 6.56	490NTW00002U	–
equipped with 2 RJ45 connectors		5.0/ 16.40	490NTW00005U	–
Conforming to UL and CSA 22.1 standards		12/ 39.37	490NTW00012U	–

Crossed shielded twisted pair cordsets	3	5.0/ 16.40	490NTC00005U	–
equipped with 2 RJ45 connectors		15/ 49.21	490NTC00015U	–
Conforming to UL and CSA 22.1 standards				

- (1) The Altivar Machine ATV320 drive can only take one communication module.
- (2) For other ConneXium connection accessories, please refer to our website www.schneider-electric.com.
- (3) Also available in 40 m/131.23 ft and 80 m/262.46 ft lengths (2).
- (4) Please refer to the "M221/M241/M251 Automation platform" catalog.
- (5) Altivar Machine ATV320 products with a compact control block require the **VW3A3600** option module adapter (item 1) in order to use any communication option modules.

VW3A3607

PROFIBUS DP V1 bus (1)(2)

Description	Reference	Weight kg/lb
PROFIBUS DP V1 communication module Port: 1 x 9-way female SUB-D connector Conforming to PROFIBUS DP V1 Profiles supported: ■ CiA 402 drive ■ Profidrive Offers several message handling modes based on DP V1	VW3A3607	0.140/ 0.308

VW3A3609

DeviceNet bus (1)(2)

Description	Reference	Weight kg/lb
DeviceNet communication module Port: 1 removable 5-way screw connector Profiles supported: ■ CIP AC DRIVE ■ CiA 402 drive	VW3A3609	—

VW3A3601

EtherCAT bus (1)(2)

Description	Reference	Weight kg/lb
EtherCAT communication module Port: 2 RJ45 connectors	VW3A3601	—

Description	Reference	Weight kg/lb
Ethernet POWERLINK communication module Port: 2 RJ45 connectors	VW3A3619	0.300/ 0.660

VW3A3627

ProfiNet network (1)(2)

Description	Reference	Weight kg/lb
ProfiNet communication module Port: 2 RJ45 connectors	VW3A3627	0.300/ 0.660

(1) The Altivar Machine ATV320 drive can only take one communication module.

(2) Altivar Machine ATV320 products with a compact control block require the **VW3A3600** option module adapter in order to use any communication option modules.

Variable speed drives

Altivar Machine ATV320

Motor starters: circuit-breaker + drive

ATV320_53440_OFF16047

GV2/ATV320 direct mounting:
GV2L08 + (VW3A9921 + GV2AF4) (5)
+
ATV320U07N4B

Applications

Two types of combination are possible:

- Drive + circuit-breaker: minimum combination
The circuit-breaker can be mounted directly on **ATV320●●●M●●** and **ATV320U04N4B...U40N4B** drives using the bracket for GV2/ATV320 direct mounting (**VW3A9921**) and the adapter plate (**GV2AF4**) (see page 14).
- Drive + circuit-breaker + contactor: minimum combination with contactor when a control circuit is needed.

The circuit-breaker provides protection against accidental short circuits, disconnection, and, if necessary, isolation.

The contactor controls and manages any protection functions. A contactor can be used downstream of the drive to help ensure the motor is isolated on stopping. In this case, the contactor size should be category AC-3 depending on the associated motor, only for operation between 25 Hz and 500 Hz.

The Altivar Machine ATV320 drive is protected electronically against short circuits between phases and between phase and ground. It therefore provides continuity of service and thermal monitoring of the motor.

Motor starters: circuit-breaker + drive

(1) GV2L, GV3L: TeSys magnetic motor circuit-breakers; accessories (see page 41).

(2) The HP values given are NEC-compliant (National Electrical Code).

(3) For the complete reference, replace ● with B or C.

(4) The circuit-breaker can be mounted directly only on the book format drive **ATV320U●●M2B** and **ATV320U04N4B...U40N4B**.

(5) To be ordered separately (see page 13), see note (4) for compatibility.

(6) A GV2P TeSys thermal magnetic circuit-breaker with the same rating can also be used with **ATV320U04N4●...U40N4●** drives. The thermal release should then be set to maximum to inhibit this function.
