

**CARACTERÍSTICAS GENERALES:**

- Oring FET opcional
- Alto aislamiento entrada-salida
- Tensión de salida ajustable
- Detección remota
- Inhibición remota
- LED entrada y salida correcta
- Alarma de fallo de salida
- Protec. inversión polaridad de entrada
- Versión Ferroviaria EN50155
- Fuego y humo: Aprobado EN45545-2

**GENERAL FEATURES:**

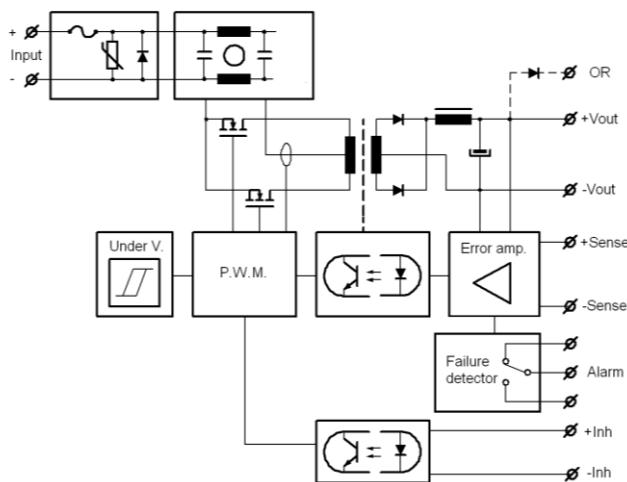

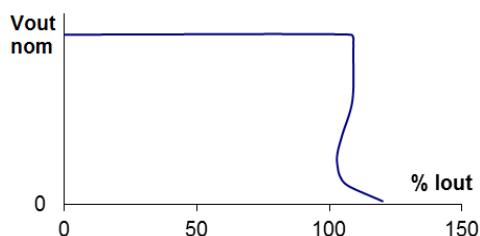

- Oring FET option
- High input-output isolation
- Adjustable output voltage
- Remote sensing
- Remote inhibit
- Input & Output OK LEDs
- Output failure alarm
- Input reverse polarity protection
- Railway version EN50155
- Fire and smoke: EN45545-2 approved

**Dimensiones / Dimensions**

**DESCRIPCIÓN**

La serie CRS-500 está constituida por convertidores de corriente continua a corriente continua con aislamiento galvánico entre la entrada y la salida, conmutando a frecuencia fija y empleando la topología de convertidor en contrafase.

Para disponer de la máxima regulación, pueden conectarse a la carga los terminales de detección remota. Esto permite compensar una caída en los cables de potencia hasta 0,3V en cada uno de ellos.

El aparato está protegido contra sobrecargas y cortocircuitos por un circuito limitador de corriente.

También está preparado para soportar una inversión de polaridad de tensión a la entrada, fundiendo el fusible de entrada en caso de conexión errónea.

En caso de subtensión en la entrada el convertidor se inhibe evitando la descarga total de la batería.

**DESCRIPTION**

The CRS-500 series consists of DC-DC converters with a galvanic isolation between input and output. The converters operate at a fixed switching frequency and use push-pull converter topology.

For maximum regulation, the remote sensing terminals can be connected to the load. This will allow a power cable voltage drop of up to 0.3 V on each cable to be offset.

The device is protected against overloads and short-circuits by means of a current limiting circuit.

The device is also protected against reverse polarity input voltage, and the input fuse blows if an improper connection is made.

When a converter input undervoltage condition occurs, the converter is disabled, thus preventing the battery from becoming totally discharged.

**INSTALACIÓN**

El producto puede instalarse de varias formas:

- Sobre un chasis mediante los taladros de las escuadras
- En carril DIN añadiendo dos accesorios clip **NP-9135**.
- En subrack de 6U añadiendo el accesorio **NP-9222**

**INSTALLATION**

The product can be mounted in several ways:

- On a chassis by means of the mounting brackets holes.
- On a DIN rail adding two clip accessories **NP-9135**.
- Into a 6U subrack adding the accessory **NP-9222**

**PUESTA EN MARCHA**

Efectuar la conexión según la figura. La utilización de la detección remota (+/-) no es imprescindible, pero si se requiere hacerla es recomendable utilizar cable coaxial o bien un par trenzado.

**PRECAUCIÓN:** Si la carga se conecta a las tomas de detección remota (+/-) faltando la conexión de la salida a dicha carga la función detección remota se puede inutilizar debido a la actuación del fusible interno de protección.

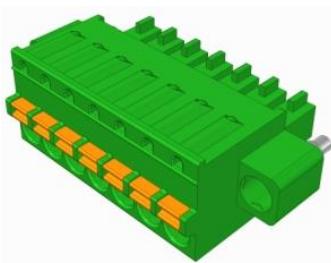

Si se requiere obtener potencias cercanas a la máxima es importante que el montaje favorezca la refrigeración por convención natural y el convertidor esté en posición vertical.

**Si se desea conectar varios convertidores en paralelo deberá realizar lo siguiente:**

- Ajustar la tensión de salida de todos los convertidores con una diferencia entre ellas lo menor posible.
- Unir las salidas en la carga utilizando cables de sección no mayor que la apropiada, y de igual longitud.
- No utilizar detección remota.

**Por motivos de seguridad es necesario:**

- Proporcionar al equipo una envolvente de protección conforme a las directivas de seguridad eléctrica del país donde sea instalado.
- Para sustituir el fusible hacerlo por otro del mismo calibre y tipo con el convertidor desconectado de la alimentación eléctrica.

**ACCESORIOS / ACCESORIES**
**2601-396**

**NP-9135**

**START-UP**

Perform connection according to the figure. Use of remote sensing is not mandatory, but if this is required, use of a co-axial or a twisted-pair cable is recommended.

**WARNING:** If the load is connected to the tabs of remote sensing (+/-S) and the connection from the output to this load is missing the remote sensing function could make unusable due to the acting of the internal fuse of protection.

If power levels close to the maximum output are required, make sure the assembly enhances cooling by natural convection and the unit is placed in vertical position.

**If several converters need to be connected in parallel, do the following:**

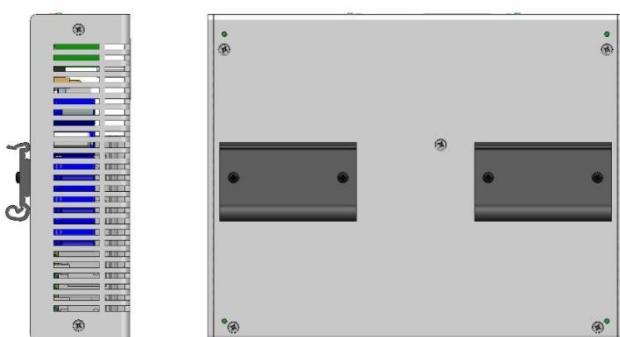

- Set the output voltage for all converters featuring a mutual difference as small as possible.
- Join the load outputs by using cables with a cross-section no greater than the one required and of equal length.
- Do not use remote sensing.

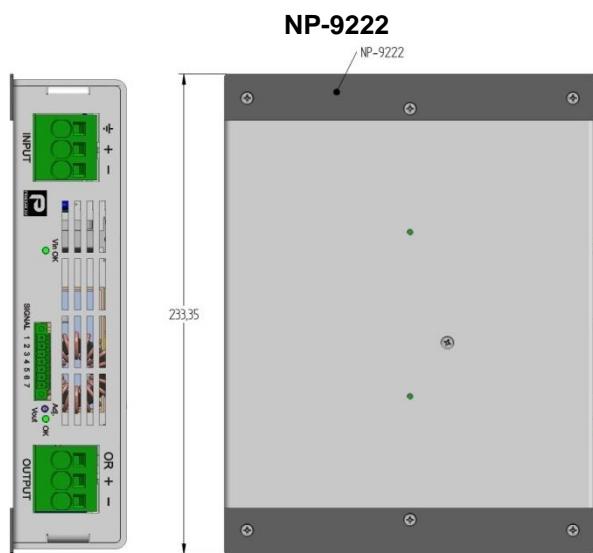

**For safety reasons, the following requirements must be complied with:**

- Provide the equipment with a protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.
- Only replace the fuse with another fuse of the same rating and type, and only after disconnecting the converter from DC power.

DECLARACIÓN DE CONFORMIDAD UE

EU DECLARATION OF CONFORMITY

El abajo firmante, en representación de / The undersigned, representing the following:

Fabricante / Manufacturer: PREMIUM, S. A.,

Dirección / Address: C/. Dolors Aleu 19-21, 2º 2ª 08908 L'Hospitalet de Llobregat, SPAIN

declara que el producto / herewith declares that the product:

Tipo / Type: Convertidor CC/CC / DC/DC converter

Modelos / Models: **CRS-500-6455 ... 6468**

es conforme con las disposiciones de las siguientes directivas UE:

is in conformity with the provisions of the following EU directive(s):

2014/35/EU	Baja tensión	Low voltage
2014/30/EU	Compatibilidad electromagnética	Electromagnetic compatibility

y se han aplicado las normas y/o especificaciones técnicas siguientes:

and that standards and/or technical specifications referenced overleaf have been applied:

EN 60950: 2005	Seguridad (Equipos de tratamiento de la información)	Safety (Information technology equipment)
EN 61000-6-3: 2007	Norma genérica de emisión	Generic emission standard
EN 61000-6-2: 2005	Norma genérica de inmunidad	Generic Immunity standard
EN 50155: 2007*	Aplicaciones ferroviarias. Equipos electrónicos utilizados sobre material rodante	Railway applications. Electronic equipment used on rolling stock material
EN 50121-3-2: 2016*	Aplicaciones ferroviarias. CEM de material rodante. Aparatos	Railway applications. EMC Rolling stock equipment
EN 50121-4: 2016*	Aplicaciones ferroviarias. CEM Aparatos de señalización y telecomunicación	Railway applications. EMC of the signalling and telecommunications apparatus

\* Ver anexo / See annex

Notas / Notes:

Para el cumplimiento de esta declaración el producto debe usarse sólo para el fin que ha sido concebido, teniendo en cuenta las limitaciones establecidas en el manual de instrucciones o la ficha técnica

For the fulfillment of this declaration the product must be used only for the aim that has been conceived, considering the limitations established in the instructions manual or datasheet.

L'Hospitalet de Llobregat, 18-12-2017
